Single Sign-On

## as a Docker Container

AVATIER | Identity Anywhere™

Built with Docker Containers

SINGLE SIGN-ON

Avatier SSO Docker container cloud-Independent solution brings employees, partners and customers web applications together to manage them as one system. More importantly, our unified digital dashboard enables C-level executives to deliver business growth and increased profits.

Avatier Identity Anywhere SSO

Introducing Identity Anywhere SSO, the world's first SSO based on Docker containers, making it the most portable, scalable and secure solution possible. Docker container technology allows our SSO to run anywhere: on any cloud, on premise or a private cloud instance hosted by Avatier.
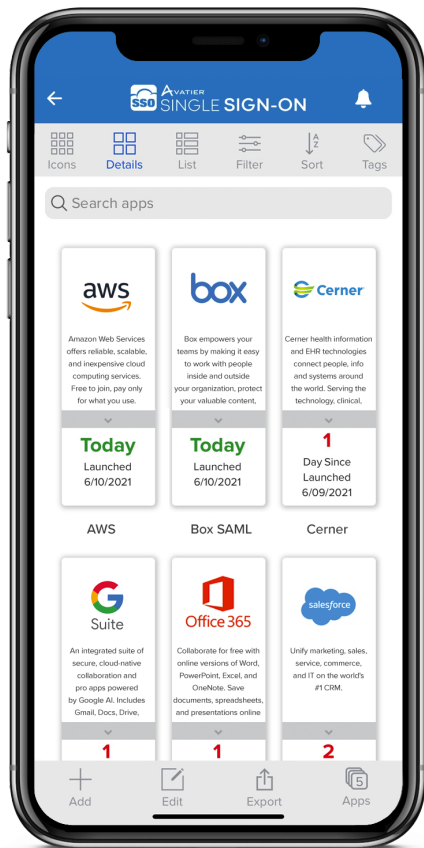

Beyond Just Sign-On

You have many options when selecting a Single Sign-On vendor. There are a host of companies that present a list of web applications to ease login for your enterprise. Our SSO provides continuous updates, auto scaling up and down, automatic load balancing, and super flexibility regardless of where you decide to run the solution. The future of SSO delivered today.

Support for 200 Billion SAML Apps

Some SSO vendors brag about how many SAML apps they support, not Avatier we have one generic code-free SAML connector that can be configured for any web application that supports SAML! Just like our web form login capture tool, it is just as easy for your organization to add applications to our SSO Store as it is for Avatier. SSO application support redefined.

Reveal app usage & last launched
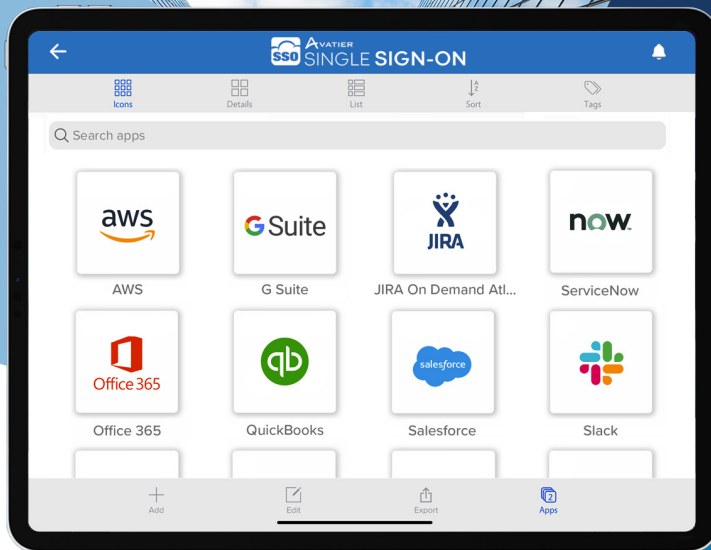

One-click access
to all of your applications. Track total license spend and reveal true cloud app usage.

Avatier Single Sign-On

True Single Sign-On Means Native Directory Support

Why would you decide to create another user name and password login for your SSO vendor? Additionally, all of your user properties, groups and even passwords need to be replicated to their identity store. Now you need to buy their SDK so you can integrate with their proprietary identity store. This smells like dual administration. Our SSO supports your native identity directory store so single sign-on remains, single.

The Lurking Hidden Cost of SaaS Applications

Do you know how much cash your company is wasting each month due to oversubscribed SaaS license purchases? Are you using more licenses than you paid for? Our SSO tracks how much per month, per user, your organization is spending on SaaS licensing.

Cloud-only identity is not enough:

- Legacy on-premise systems
- Governed by tight compliance
- Lack of trust in cloud security

The hybrid identity crisis:

- Legacy maintenance and upgrades
- Separate cloud/on-premise models
- Labor intensive operations management
- Lacks CPU memory auto-scaling
- Manual updates
- Requires load balancer management
