AVATIER™
Identity **Anywhere**™

Transform How Your Enterprise Operates In 14 Days, **Free**

TEST FLIGHT

At a Glance

The Avatier Test Flight is a free 14-day pilot for you to learn what IT innovators everywhere are raving about. Due to massive interest and sign-ups, **the Test Flight is currently invite only.**

"We selected Avatier to increase customer satisfaction and improve help desk efficiency."

Vic Chandar
Director Client Operations
Cox Enterprises

Why You'll Love This

Self-Service Identity Management

Watch your customer satisfaction levels soar. No waiting in a queue for assistance, and they won't be placed on hold to resolve IT requests.

Immediate ROI

Reduce your operational and labor costs with a lower cost-per-interaction, reduced staffing requirements and significant decrease in help desk requests.

Insanely Easy

Flip it on, invite your team, and watch the magic happen. Minimal IT needed. No process change. Just go.

Avatier Cloud Journey

We want to make sure your time (and ours) is well-invested.
Follow our easy 4-step journey, and you're set up for success.

DAY 1

Install Agent/Basic Testing
Setup is insanely easy. Just meet with your Account Executive, install our agent locally, and you're off to the races.

DAY 3

Copy Database/Basic UAT Testing
We will not cut over to production just yet. Lets get your data in the cloud so you can perform some basic user acceptance testing (UAT).

DAY 8

Production Cutover
Now its time to copy your database one more time and change your DNS settings to the cloud. Conduct your final UAT testing until our next meeting.

DAY 15

Recap
Summarize your Avatier Cloud Trial From rep feedback, to eye-popping insights.

What's Involved

Find Testers
Please identify test users for your Avatier Cloud Migration.

IT Leadership
Your head of IT should remain involved throughout since the people on the hook for managing IT have the most to gain.

Minimal IT Required
Avatier is insanely easy to start using, fast. All integrations are as easy as clicking a few buttons.

AVATIER
Identity Anywhere™

Moving to the Cloud is **easy** as

Test Flight Avatier Cloud Agent Install Requirements

We want to make sure your time (and ours) is well-invested.

Follow our easy **3-step** journey, and you are set up for identity management success in the cloud.

STEP
1

Find a Internet connected machine

Identify a domain-joined Windows **2016/2019/2022/2025** Workstation/Server. Ensure it is fully patched and has **.NET 4.8 or higher** installed. Provide Gateway IP address.

Ensure you have a domain admin account

Administrator account with a known and tested password needed prior to install. It must have Login as Service permissions. Create AIMSConfig global group and add app admins.

STEP
2

STEP
3

Create a SSL Certificate

Have a SSL certificate and public key password ready to go. Here is a link explaining how to create a self-signed certificate. Steps for creating SSL certificate

Important Note **.NET Framework 4.0 is outdated and no longer supported by Microsoft.** It is strongly recommended to upgrade to .NET 4.8 or higher to ensure security and compatibility with the latest Avatier Identity Management System (AIMS) versions.

By following these steps, you'll ensure a smooth setup process for Avatier Cloud Agent installation and identity management in the cloud.

# Identity Anywhere Agent Install Requirements

Complete the below requirements and screenshot gathering and send to services@avatier.com prior to scheduling migration or trial.
Below are the steps to validate Avatier's Identity Anywhere Requirements.
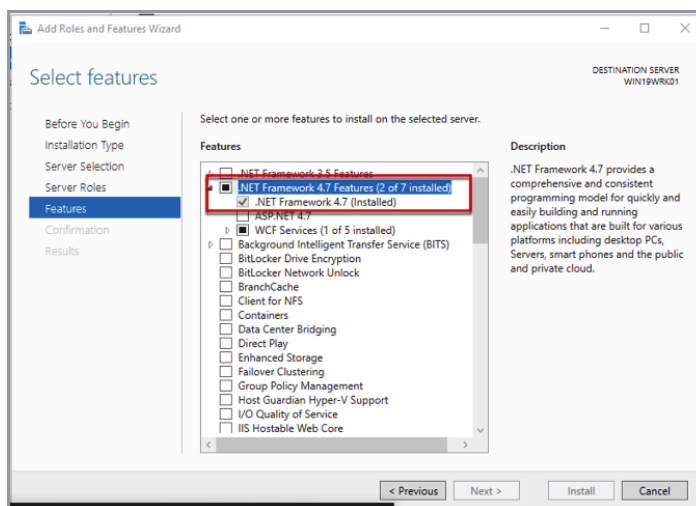

Step 1: Validating Machine Requirements

Validate your version of Windows
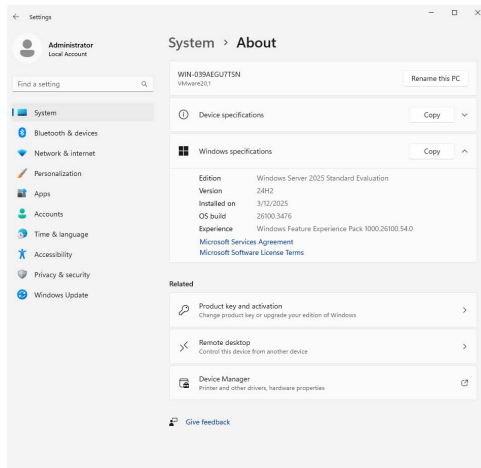

Validate the machine is fully patched
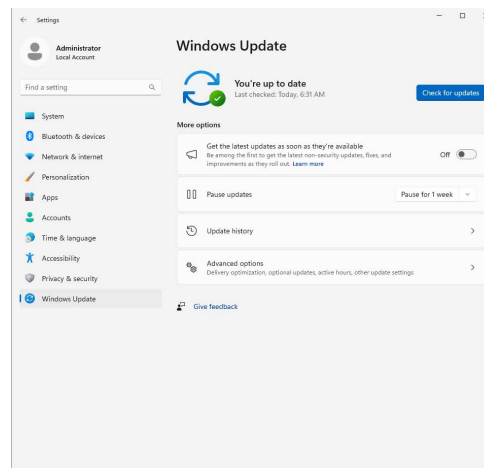

Validate Microsoft's .NET 4.8 or higher is installed.

Step 2: Validate Active Directory Domain Administrator Account

Validate the Active Directory Domain Administrator Account by accessing Active Directory User and Computers, select the Admin Account Properties and select the Member Of tab. The Domain Administrator Account must also have Login as Service permissions.

Create a Global Group in Active Directory named AIMSConfig and add Identity Anywhere admins.

Provide a screenshot validating that Admin Account is a member of Domain Admins Group.
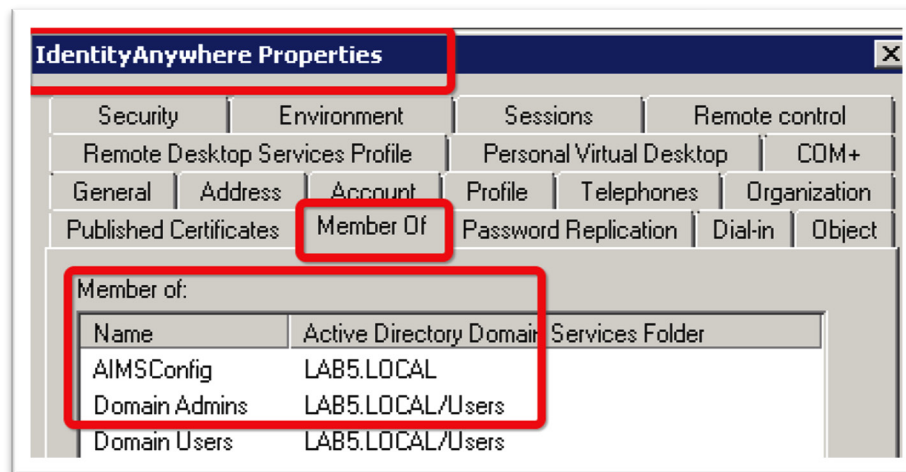

Step 3: Verify the Agent Server's Certificate

After installing your certificate following the instructions in the "Loading the Identity Anywhere Agent Certificate" document, validate the certificate installation. Provide a screen shot of from the certificate MMC snap-in that shows the certificate is installed in the personal certificate store, the dates of the certificate are valid, and the certificate's intended purposes are for both server and client authentication.
